Sketching Workshop Worksheet: Apple
With Francesca Pang

Sketching Workshop Journaling Worksheet

Drawing with Light and Shadow!

Hello! Let's learn how to make flat shapes look 3D by using light and shading. We'll practice with shapes and draw an apple that looks like it could pop off the page!

Use this worksheet to practice your observation and sketching skills. Follow the prompts below to guide your drawing and shading.

Step 1: Try Grayscale

Use your pencil to show **light to dark**. Press:

- Softly for **light**
- Medium for **medium**
- Hard for **dark**

Draw a grayscale bar below (from light to dark):

--	--	--	--	--	--	--

Step 2: Turn Shapes into Forms

Start with these shapes:

- A **circle** becomes a **sphere**
- A **square** becomes a **cube**

Draw and shade each one to make it look 3D!

1. **Circle** → **Sphere** (Draw and shade below)

2. **Square** → **Cube** (Draw and shade below)

Step 3: Add a Light Source

Using the sphere and cube you drew on the last page, place a little sun or light bulb in the top right of your sketch. Use it to help decide where the light hits and where shadows go.

Where is the darkest part of your shape? Top Bottom Side

Where is the lightest part? Top Bottom Side

Extra drawing space in case you want to try the sketches again.

Step 4: Draw Your Apple

Let's draw a simple apple with a bite taken out!

- Start with a circle
- Add a **stem** (use a rectangle or cylinder shape)
- Add a bite (what shapes do you see?)

Draw your apple here:

Now shade it! Use your grayscale skills to:

- Make the top light
- Sides medium
- Bottom dark
- Don't forget the bite and stem!

Add a shadow below the apple too!

Final Check

___ I used light, medium, and dark shading

___ I added a light source

___ I made shadows to show the apple is sitting on something

___ I had fun drawing!

Great job! You used shapes, shading, and shadows to bring your drawing to life!
